Published Abstract:

The IDMC's Global Report on Internal Displacement (GRID) is the world's leading source of data and analysis on internal displacement. This year's edition includes a special focus on the complex relationships between disasters, conflict and violence, food security and internal displacement.

Published Abstract:

The World Bank's *World Development Report 2023*, "Migrants, Refugees, and Societies," proposes an integrated framework to maximize the development impacts of cross-border movements on both destination and origin countries and on migrants and refugees themselves. On April 28, 2023, The Center for Global Development, Refugees International, and the World Bank Group held an event to launch the *World Development Report 2023*. During this event, the authors provided a presentation of the report followed by a forced displacement panel discussion, which focused on key takeaways from the report and finding sustainable solutions to refugee crises.

Refugees, and Societies

The World Bank

Published Abstract:

Migration is a development challenge. About 184 million people—2.3 percent of the world's population—live outside of their country of nationality. Almost half of them are in low- and middle-income countries. But what lies ahead? As the world struggles to cope with global economic imbalances, diverging demographic trends, and climate change, migration will become a necessity in the decades to come for countries at all levels of income. If managed well, migration can be a force for prosperity and can help achieve the United Nations' Sustainable Development Goals. *World Development Report 2023* proposes an integrated framework to maximize the development impacts of cross-border movements on both destination and origin countries and on migrants and refugees themselves. The framework it offers, drawn from labour

economics and international law, rests on a “match and motive” matrix that focuses on two factors: how closely migrants’ skills and attributes match the needs of destination countries and what motives underlie their movements. This approach enables policy makers to distinguish between different types of movements and to design migration policies for each. International cooperation will be critical to the effective management of migration.
